

**Now there's a reason to  
build termite proof  
building with**

**LONG TERM PROTECTION  
FROM  
SUBTERRANEAN TERMITE**

## TERMITE RETICULATION SYSTEM

DDS Reticulation System designed to effectively treat the area under concrete slabs, for protection against infestation by subterranean termites and around the external perimeter of structures to prevent termites entering from the outside of a building. Reticulation System is installed prior to laying of the concrete slab for the internal system and externally after external work has been completed but prior to any concreting, paving etc. The termiticide is added after the concrete slab has dried.

### WHAT IS DIFFERENT ABOUT DDS TERMITE RETICULATION SYSTEM

Unlike any other system which uses perforated pipes, the DDS Reticulation System uses flexible pipes, which have emitters fabricated into it at the time of manufacture.

Emitters are the heart of the system and these acts as a back flow preventers/ filters and are scientifically graduated to flow at a specific rate. The Emitters are located every 175mm/ 300mm along the length of the pipe which is at least double the recommended minimum needed to accurately deliver and spread the termiticide barrier.

This is of particular advantage in difficult areas such as clay sites, uneven sand pads and step downs and where there is height difference. It is the **ONLY LOW PRESSURE SYSTEM**.

Because of the “even flow” it is not necessary to balance each line in the system against other lines. A further benefit is that each line can be run for upto 50 meters, making it possible to treat the entire circumference of most structures from one pump up points.

- Emitters ensure no grit, roots from vegetation, or other form of intrusion will clog the pipe and render it ineffective.
- The pipe won't crush under the weight of concrete.

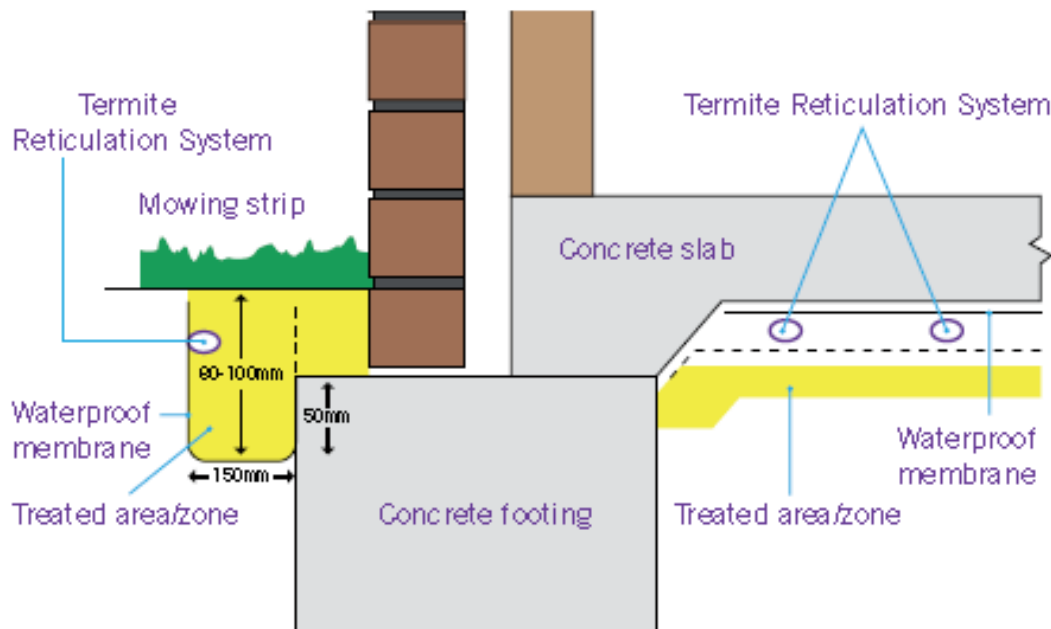

## ANNUAL INSPECTION

The condition of the DDS warrantee is annual inspection with retreatment if required. The inspection is being carried out annually. The primary purpose of the yearly inspection is to ensure breaches of the chemical barrier have not occurred.

### BENEFITS OVER CONVENTIONAL TREATMENT METHOD

- | <u>Conventional Treatment Method</u>  | <u>DDS Termite Reticulation System</u>  |
|---|---|
| <ul style="list-style-type: none"><li>• Retreatment requires drilling and retrenching</li><li>• Drilling holes damages the building's moisture barrier and creates further access to termites In the future</li><li>• During retreatment every time drilling and retrenching required</li><li>• Cost of retreatment is very high</li><li>• Mess-up and disturbance during retreatment</li></ul> | <ul style="list-style-type: none"><li>• No drilling and retrenching required during retreatment</li><li>• No damage to buildings moisture barrier during retreatment</li><li>• Spread over the 50 years life of a system</li><li>• Cost of retreatment is very low</li><li>• No Mess-up, only peace of mind</li></ul> |

### INSTALLATION OF DDS RETICULATION SYSTEM

Regd. Office : 24, Bahubali Colony, Banswara – 327001 (Rajasthan) Tel. : +91-8290701591

## Other Services Offered:

### 1. Termite Control (Pre-Construction & Post Construction)

- New Generation odor free, non repellent insecticide that kills the termite
- Basic Clean up after treatment is included in service
- Consultancy for Anti-Termite Structural Design in Pre-Construction treatment
- **Service Warrantee is being provided for the contract period**

### 2. Cockroach, Ant & Silverfish Control

- Odor Free & Convenient
- Protection against Cockroaches, Ants and Silverfish
- Advanced Gel-Baiting System

### 3. Rodent Control

- Our Trained technicians will inspect the affected areas.
- Use of safe, non-toxic and eco-friendly glue-based rat and mouse trap and RTU Wax Block Bait.
- Suggestions on prevention of re-infestation.
- Treatment is in accordance with FSSAI Act

### 4. Integrated Fly, Mosquito & Cockroach Control

- Our Trained technicians will inspect the affected areas.
- Use of odor free residual Insecticides having long period effect upto 2-3 months
- Advanced Electric Flying Insect Killer (Optional)

### 5. Bird Control Services : Using 100% Co-Polymer Nylon Net

Features :

- Very Strong and Durable
- Transparent
- UV Stabalized, No effect of Sun & Rain
- Does not block Air or Light
- Economical as compared to Steel and Aluminum
- No rusting or Corrosion like Metal nets
- Easy way to eliminate the Pigeon menace
- 2 Year Warrantee

Also offering Stainless Steel Bird Spikes warranted for 20 years
